Advertisement.

THE following short, but curious account of the Russian Empire, as it began to emerge from barbarism in the year 1710, cannot but be acceptable to the public from the curiosity of the subject, and from the merit of the performance. Lord Molefworth's account of the Revolution in Denmark, which totally overturned the constitution of that

country, is one of our standard books. Lord Whitworth's little treatise will throw considerable lights upon the formation of the Muscovite power, and upon the plans of that extraordinary genius, Peter the Great. Each author shows what lasting benefits Embassadors and foreign Ministers might confer on mankind, beyond the temporary utility of negotiating and sending intelligence.

Our author, Charles Lord Whitworth, was son of Richard Whitworth

Whitworth Esq; of Blower-
 pipe in Staffordshire, who a-
 bout the time of the Revolu-
 tion had settled at Adbaston.
 He married Anne Moseley, niece
 of Sir Oswald Moseley of Ches-
 hire, by whom he had six
 sons and a daughter. Charles;
 Richard, lieutenant-colonel of
 the Queen's own royal regi-
 ment of horse; Edward, cap-
 tain of a man of war; Gerard,
 one of the chaplains to King
 George the First; John, cap-
 tain of dragoons; Francis, sur-
 veyor-general of his Majesty's
 woods,

woods, and secretary of the island of Barbadoes, father of Charles Whitworth Esq; member in the present parliament for Minehead in Somersetshire; and Anne, married to Tracey Pauncefort Esq; of Lincolnshire.

Charles, the eldest son, was bred under that accomplished minister and poet, Mr. Stepney, and having attended him through several courts of Germany, was in the year 1702 appointed Resident at the Diet of Ratisbon. In 1704, He was named Envoy extraordinary to the court of

of Petersburg, as He was sent
Embassador extraordinary thither
on a more solemn and important
occasion in 1710. M. de Ma-
tueof, the Czar's minister at
London, had been arrested in
the public street by two bailiffs,
at the suit of some tradesmen
to whom he was in debt.
This affront had like to have
been attended with very seri-
ous consequences. The Czar,
who had been absolute enough
to civilize savages, had no idea,
could conceive none, of the
privileges of a nation civilized
in

in the only rational manner, by laws and liberties. He demanded immediate and severe punishment of the offenders: He demanded it of a Princess, whom he thought interested to assert the sacredness of the persons of Monarchs, even in their representatives; and He demanded it with threats of wrecking his vengeance on all English merchants and subjects established in his dominions. In this light the menace was formidable-----otherwise, happily the rights of a whole people

ple were more sacred *here* than the persons of foreign ministers. The Czar's memorials urged the Queen with the satisfaction which She had extorted herself, when only the boat and servants of the Earl of Manchester had been insulted at Venice. That State had broken through their fundamental laws to content the Queen of Great Britain. How noble a picture of government, when a Monarch that can force another nation to infringe it's constitution, dare not vio-

b

late

late his own! One may imagine with what difficulties our Secretaries of State must have laboured through all the ambages of phrase in English, French, German and Russ, to explain to Muscovite ears and Muscovite understandings, the meaning of indictments, pleadings, precedents, juries and verdicts*; and how impatiently Peter must have listened to

* Mr. Dayrolles in his letter to the Russian Ambassador, March 10, 1705, gives him a particular account of the Trial before the Lord Chief Justice Holt.

Vide Mottley's Life of Peter I. vol. 2. p. 57.

promises

promises of a hearing next term ! With what astonishment must He have beheld a great Queen, engaging to endeavour to prevail on her Parliament to pass an act to prevent any such outrage for the future ! What honour does it reflect on the memory of that Princess to see her not blush to own to an arbitrary Emperor, that even to appease *him* She dared not put the meanest of her subjects to death uncondemned by law ! “ There are,” says she*, in one of her dispatches to him, “ in-

* *ibid.* p. 67.

“superable difficulties with re-
 “spect to the ancient and fun-
 “damental laws of the govern-
 “ment of our people, which
 “we fear do not *permit* so severe
 “and rigorous a sentence to be
 “given, as your Imperial Ma-
 “jesty at first seemed to expect
 “in this case: And we persuade
 “our Self, that your Imperial
 “Majesty, who are a Prince
 “famous for clemency and for
 “exact justice, will not require
 “us, *who are the guardian and*
 “*protectress of the laws*, to in-
 “flict a punishment upon our
 “subjects,

“subjects, which the law does
 “not empower us to do.”

Words so venerable and heroic,
 that this broil ought to be-
 come History, and be exempted
 from the oblivion due to the
 silly squabbles of ambassadors
 and their privileges. If Anne
 deserved praise for her conduct
 on this occasion, it reflects still
 greater glory on Peter, that this
 ferocious man *had* patience to
 listen to these details, and had
 moderation and justice enough
 to be persuaded by the reason
 of them.

Mr.

Mr. Whitworth had the honour of terminating this quarrel. In 1714, He was appointed Plenipotentiary to the Diet of Ausbourg and Ratisbon; in 1716, Envoy extraordinary and Plenipotentiary to the King of Prussia. In 1717, Envoy extraordinary to the Hague. In 1719, He returned in his former character to Berlin; and in 1721, the late King rewarded his long services and fatigues, by creating him Baron Whitworth of Galway in the kingdom of Ireland, the preamble of his patent enumerating

merating many of his virtues and labours, being as follows :

CUM alii homines re aliâ clari inclytique sese Nobis commendaverint, haud minorem tamen vel sibimet gloriam acquirere, vel Regnis nostris utilitatem conferre eos existimamus, qui res nostras apud principes statusque externos prudenter feliciterque administrant. Inter hosce quidem eminet plurimum tum longinquo usu atque exercitatione, tum solertiâ quadam singulari fidelis & dilectus nobis Carolus Whitworth Armiger.

miger. Variis in aulis externis
 perfunctis muneribus sese anteces-
 soribus nostris gloriosæ memo-
 riæ, Gulielmo Tertio Regi, Re-
 ginæque Annæ perspectum impri-
 mis comprobatumque reddidit. In
 Comitibus Ratisbonensibus, in Aulâ
 Cæsareo-Germanicâ, atque apud
 Czarum Muscoviæ temporibus dif-
 ficillimis res maximi momenti sem-
 per cum laude tractavit, ac me-
 ritis suis eximiis summos honores
 rerum exterarum curatoribus tri-
 bui solitos, legati scilicet extraor-
 dinarii et plenipotentarii caracte-
 rem consecutus est. Ita ornatum,
 ita

ita commendatum nos Eum accepi-
 mus, ac proinde ejus operâ in ar-
 duis compluribus negociis tanto cum

Ordines Generales Uniti Belgii,
plená potentiá res nostras procu-
rat, ad dignitatem gradumque
Baronis in Regno nostro Hiberniæ
promovendum esse statuimus: Sci-
atis igitur, &c.*

The next year his Lordship
was entrusted with the affairs
of Great Britain at the Congress
of Cambray, in the character
of Embassador extraordinary and
Plenipotentiary. He returned
home in 1724, and died the
next

next year at his house in Gerard-street, London. His body was interred in Westminster Abbey.

These short memorials, communicated to me by his family without any ostentation, are all I have been able to recover of a man so useful to his country ; who besides the following little piece, which must retrieve and preserve his character from oblivion, has left many volumes of state-letters and papers in the possession of his relations. One little anecdote of him I was told by the late Sir Luke Schaub, who

had it from himself: Lord Whitworth had had a personal intimacy with the famous Czarina Catherine, at a time when her favours were not purchased nor rewarded at so extravagant a rate as that of a diadem. When He had compromised the rupture between the court of England and the Czar, He was invited to a ball at court, and taken out to dance by the Czarina. As they began the minuet, She squeezed him by the hand, and said in a whisper, *Have you forgot little Kate?*

It

It is to be lamented that so agreeable a writer as Lord Whitworth, has not left us more ample accounts of this memorable Woman. Even his portrait of her Lord is not detailed enough to satisfy our curiosity. How striking a picture might an author of genius form from the contrast exhibited to Europe by four extraordinary men at the same period! Peter recalled that Image of the Founders of Empires, of whom we read with much satisfaction and much incredulity in ancient story. Charles the Twelfth, of those frantic Heroes
of

of Poesy, of whom we read with perhaps more satisfaction and no credulity at all. Romulus and Achilles filled half our gazettes, while Lewis the Fourteenth was treading to Universal Monarchy with all the pomp and policy of these latter ages. William the Third was opposing this modern Xerxes with the same arts; and (with perhaps a little of Charles's jealousy) had the good fortune to have his quarrel confounded with that of Europe. While Peter tamed his savages, raised cities, invited arts, converted forests into fleets,

Charles

Charles was trying to recall the improvements of war to its first principle, brutal strength; fancying that the weight of the Turkish Empire was to be overturned by a single arm, and that heroic obstinacy might be a counterpoize to gun-powder.

A Philosopher in these four men saw at once the great outlines of what the World had been, and of what it is.

Lord Whitworth's MS. was communicated to me by Richard Owen Cambridge Esq; having been purchased by him in a very
curious

curious set of books, collected by Monsieur Zolman, Secretary to the late Stephen Poyntz Esq; . This little library relates solely to Russian history and affairs, and contains in many languages every thing that perhaps has been written on that country. Mr. Cambridge's known benevolence, and his disposition to encourage every useful undertaking, has made him willing to throw open this magazine of curiosity to whoever is inclined to compile a History or elucidate the Transactions of an Empire, almost unknown even to it's cotemporaries.

IN THE YEAR 1710.

THE Country of Russia,
has formerly been *Russian*
so little frequented by Fo- *Empire.*
reigners, and their share in the
affairs of Europe so inconsider-
able, that to form any just no-
tion thereof it may be of use in
the present juncture, to give
some general account of the

B Czar's

2 *A summary Account*

Czar's dominions, revenues, and forces, which may serve as a ground-work, to judge more properly of whatever may happen in the course of this war.

The Empire of Muscovy is at
Extent. present of a vast extent, bounded on the North by the Ice-sea, and the unknown tracts near the Pole, on the East and South-East by China, Great-Tartary, the Usbecque-Tartars, and Persia; on the South by part of Turkey, Poland, and Lithuania, and on the West by the Baltick-sea, Sweden and
Lapland :

Lapland: A Territory almost *Nature.* equal in compass of ground to the rest of Europe, but very short of several kingdoms, in the riches of the country, and number of the people: Most like the American plantations on the Continent, the banks of the several rivers being tolerably inhabited, and land enough tilled for the necessity of life and the conveniency of their trade, as is very obvious from the frontiers of Lithuania to Mosco; for the ground is only cleared in proportion to the largeness of the

4 *A summary Account*

towns or villages on the road, and the rest wood on all sides. In the southern parts are very large unfrequented plains of several hundred miles, extremely fruitful in grass, and all sorts of sweet herbs and flowers, but wanting in wood and good water, and exposed to the sudden inroads of the Tartars, against which no peace or treaty is any security.

The soil is different in nature
Climate. and goodness according
to the climate: That about
Mosco

Mosco is sandy and not very fruitful, but sufficiently supplied by the convenience of the rivers in summer, and cheapness of sled carriage in the winter, which generally lasts there about six months.

The inhabitants are chiefly those called Muscovites, *Inhabitants.* the rest swell the bulk, but add little to the strength of the country; the Laplanders and Samoides being too heavy and dispirited; the several nations of Tartars too wild, and the Cossacks

6 *A summary Account*

sacks too full of freedom and privilege to be of any great advantage.

The Laplanders and Samo-
Laplanders iedes are dispersed all
and
Samoiedes. along the large woods
on the White and Ice seas; their
stature is low, their figure very
disagreeable, their apprehension
and understanding scarce above
that of brutes, and their reli-
gion, if any at all, little un-
derstood by those who frequent
them. Their food is generally
raw fish, or whatever they kill

or

or find dead, without distinction; they are of use to the Muscovites in their seal-fishery about Nova Zembla; and pay the Czar a small tribute of furs.

The kingdoms of Siberia and Daury were first entered *Tartars of Siberia and Daury.* by some Russian male-factors who fled from justice in the time of John Basilowitz, but on this discovery received their pardons, and being seconded by some soldiers made several settlements on the nearest rivers; which by degrees have been

8 *A summary Account*

been extended to the frontiers of China, the last fortress of the Czar's dominions called Nerczinsk, being built on the river Amur which falls into the South-sea; the original inhabitants of these wide countries were several sorts of Tartars, who living in little *hordes* or companies under distinct governments, like the Indian nations in America, were easily subdued; near the Russian plantations they have learned to dwell in houses, to till the ground, and pay the Czar an annual tribute of furs,
as

as fables, foxes and ermines :
The other Tartars, who continue
to range about with their tents,
do not acknowledge the Czar's
sovereignty, and are often trou-
blesome in little parties, though
not capable of making any great
impreffion.

Casan and Astracan were Tar-
tarian kingdoms, who *Of Casan*
once made the Musco- *and*
Astracan.
vites tributary, and several times
brought that government to the
brink of ruin ; but were en-
tirely subdued by John Basilo-
C witz,

10 *A summary Account*

witz, the first in 1552, and the other in 1554: After which he built several towns on the Wolga, strengthened them with good garrisons, and sent colonies of his own people to Casan and Astracan, who to this day do not suffer any Tartarians to settle within the walls.

The Czeremesses and Mor-
Czeremesses duars possess a large
and
Morduars. tract of land between Nisen-Novogrod and Casan, on both sides of the river Wolga; they live in houses, follow husbandry,

husbandry, and pay the Czar taxes and service as his other subjects, but never furnish recruits to the war.

The Baskirs are a powerful nation, extended from *Baskirs*. Casan to the frontiers of Siberia, they have some villages, but maintain their old freedom, and rebelled in 1707, when the Czar's officers would have loaded them with new impositions, and forced several of them to be baptized: They were appeased by the show of force, and redress of their grievances.

12 *A summary Account*

The rest of the country to Astracan and the frontiers of the Usbecques, is haunted by *Calmucks*. the Calmucks, and other hordes, who remove with their tents according to the season and convenience of subsistence : The Czar makes them presents every year of cloth, money, and some arms ; and in return they are obliged to serve him in his wars without pay, which they sufficiently make up to themselves, by plundering friends and foes wherever they march ;
the

the greatest number which has of late appeared in arms for the Czar, was about twelve thousand, who coming eight days after the battle of Poltawa, were dismissed back again, only about two thousand were sent into Livonia. The Religion of the Tartars is either Mahometan or Heathen, in which they have been left undisturbed by the Czar and his ancestors.

The Cossacks are distinguished into three sorts, known *Cossacks*. by the places where they first settled

14 *A summary Account*

settled themselves; but are all of the same nation, language, religion and form of government. They were originally Polish Peasants, formed into a militia under their own officers and discipline, and placed in the fruitful plains of the Ukraine, to secure the frontiers of the common-wealth against the Tartars; after some years they increased prodigiously in number and riches, and could no longer bear the indignities of the Polish Nobility, who affected to treat them as their slaves

on

on all occasions; this usage was the rise of several bloody wars, with different success.

In one of the first, the Cossacks being worsted, several of them rather than *Cossacks of the Don.* submit to the yoke, removed from the Ukraine to the unfrequented banks of the Don, or Tanais, where they begun a new plantation. In the year 1637, another detachment on the same occasion resolved to seek their fortune as far as the Caspian sea, but in their passage were persuaded

suaded by their old countrymen on the Don, to stop short and join in an attempt against Asoph, which they took the same year and kept till 1642, when the Turks approaching with a great army, and the Muscovites refusing them timely succours, they burnt the place, and fixed the seat of their little commonwealth at Circasky, a town on an island in the Don: Some time after they put themselves under the protection of the Muscovites; and had lately thirty nine towns on that river, from Rybna to Asoph, most of them on the North-

North-East side: The country is generally without trees, but fruitful to a wonder in grass, flowers, sweet herbs, wild asparagus, &c. They sow very little corn, that being only the employment of their slaves; nor do they eat much bread, roots, or herbs; their chief diet being fish, flesh, and fruits; their riches consist in cattle, horses, dromedaries and camels; in their houses and cloaths they are generally neater than the Muscovites; their religion is after the Greek, or Eastern Church;

D

they

they have very few tradesmen, or artificers; arms are their employment and delight, which in times of peace they exercise by parties against their constant enemies, the Calmuck, Cuban, and Crim Tartars; and in time of open war against the Turks on the Palus Mæotis. Their government is a sort of military Democracy; their chief *Hetman*, or Colonel over all, keeps his residence at Circasky: He is elected in a general meeting of the captains and civil officers of the nation, but is confirmed by
the

the Czar, and then his employment lasts for life, which he often looses on an unfortunate expedition, or other tumult: Every town is like a little common-wealth, and has it's own *Hetman*, or Captain, chosen yearly, who has the care of all business civil and military, and in the field acts as captain of his own community: They are left in possession of their old laws and customs, pay the Czar no tribute, furnish no recruits, and are only bound to appear in arms at their own charge when

D 2 summoned:

summoned: But on the contrary their captains used to receive yearly presents from his treasury of cloth, money and corn; they have very great privileges, one of the most considerable was the freedom of any peasant or slave, who being once in their country could not be re-claimed by his master, or the Muscovite government; and on this account vast numbers of deserters sheltered themselves here in the present war, of which the Czar being informed, Prince Dolgoruki was
sent

sent four years ago with twelve hundred men to search them out, he found some hundreds, but not being on his guard, was in his return attacked by the Cossacks and cut to pieces with all his people; this occasioned a general revolt, and employed the Czar about ten thousand men near two years, in which troubles many of their towns were burnt, and no quarter given to man, woman, or child, besides several hundreds who were publickly executed at Veronitz: This has very much dispeopled
the

22 *A summary Account*

the country, and made the name of Muscovy odious to the rest. In their most flourishing condition, they might be reckoned at fifteen thousand men fit to bear arms.

The Cossacks of the Ukraine, are much more numerous and considerable, their dominions extending several hundred miles between the rivers Boristhenes, or Neiper, and the Don; in 1654, they with their Hetman, on ill usage revolted from Poland,

land, and put themselves under the Czar's protection, giving him up Chioff, Czernichoff, and several other strong towns, as pledges of their fidelity. This country is extremely well peopled, and tilled; their towns are many, all fortified with a dry ditch, earthen wall, and palisadoes; the villages are large and neatly built with wood, they drive a great trade in hemp, pot-ash, wax, corn and cattle; they live in much ease and plenty, enjoying the same privileges as those on the Don, which

24 *A summary Account*

which with their riches, drew upon them the envy of the Muscovite nobility and government, who by degrees made several incroachments on their liberties; and from hence sprung an universal discontent, and the revolt of Mazeppa to the King of Sweden; which being ill managed, the residence town of Bathurin was immediately taken and burnt, and above six thousand persons put to the sword without distinction of age or sex.

The

The Zaporovian Cossacks are just of the same temper and manner of life with those on the Don; they are so called from the Falls in the river Boristhenes, about which they seated themselves chiefly for their greater security and convenience of their incursions against the Turks and Tartars: When the Cossacks of the Ukraine, discouraged by the severe execution at Bathurin, sat still, these openly declared for Mazeppa, and continued

26 *A summary Account*

tinued firm to him to the last ; two or three thousand followed his fortune to Bender, and are still with the King of Sweden ; most of the rest were cut to pieces, so that the remains of that name are at present very inconsiderable.

From these accounts it is plain the Czar's strength must *Muscovites.* be chiefly computed from his national Muscovites, from whence alone his regular forces are formed and maintained, if you except some few contributions

contributions from the Mor-
duars and Czeremefs Tartars,
who by degrees have been civi-
lized and subjected. *Their Num-
bers.*
The higheft and moft
probable computation of their
numbers is, by

Houfes that contribute to the }
war in money, } 884000

Houfes that contribute towards }
carriages and provifions, } 424000

Houfes 1,308,000.

Souls.

Which at a medium of five }
persons to a houfe, make } 6,540,000

28 *A summary Account*

I have seen another by which the Empire was divided into eighty four parts, for raising the Czar's fleet in 1697 :

	Houfes.
Each part reckoned at - - -	10,000
In all,	840,000

	Souls.
At five persons per house,	4,200,000

These calculations comprehend all the Muscovites and their several colonies from Chioff to China, and the Ice-sea.

As the ground lies in most parts untilled, and the improvement

ment of every gentleman's revenue is the number of his peasants, or subjects; it has been the old maxim of the Muscovite officers in all their successful wars to carry off as many of the people as they could, and plant them on their own estates: Several towns on the Wolga, are the fruits of their former expeditions in Poland, and Lithuania; and they have at present drained above one third of the inhabitants from Ingria and Livonia, and settled whole villages of them in the
southern

30 *A summary Account*

southern parts towards Veronitz, who finding their new slavery easier than their old, the earth more fruitful, and the climate more gentle, would, I believe, never return back, though left at liberty; an irreparable loss to the King of Sweden, if ever those provinces should return to their former master. Ingria has in some measure been re-peopled by colonies of Muscovites: Most of the great families now in being are of foreign extraction; as the Galliczyns, Apraxins, Nareskins, &c. from Poland;

Poland; the Circaskys from Tartary; and the Czar prides himself in a Prussian original.

They are divided into three ranks, the Nobility, *Degrees.* called KNEAS; the Gentry, called DUORNINS, and the PEASANTS.

The KNEAS, or Dukes, were antiently heads of the Nobility. little governments into which this country was divided, but were all subdued in time by the Princes of Volodomir, who translated

translated their residence to Mosco, and took upon them the title of **WELIKI KNEAS**, or *Great Duke*: The races of these families still retain their antient title, and several Poles transplanted thither, as they became considerable, assumed the same mark of distinction, on pretence of being descended from their **WAYWODES**, or Palatines. This title is differently respected, according to the revenue or employment of the person; for those Dukes who submitted on condition, and received

ceived estates in exchange for their petty sovereignties, still continue in some splendor; others have raised themselves again by their civil or military service, while the rest are reduced to the lowest poverty and contempt: And two years ago, there were near three hundred Kneas common soldiers in Prince Menzikoff's regiment of dragoons. To remedy the confusion of this title, the Czar has begun since his progress to make some alterations: His late first Minister Golowin,

F

and

and General Gordon, were made Counts by the Emperor; Alexander Menzikoff his favorite, was made Prince of the Empire, four years ago: But the Czar's ambition encreasing with his success, he thought of bestowing his own honours, and soon after created Prince Menzikoff Duke of Ingria. When Monsieur Golofkin, his present first Minister and Great Chancellor, was made a Count by the Emperor, he received soon after the same title from the Czar, who
has

has since made his High Admiral Apraxin, and Lord Privy-seal Sotoff, both Counts, without any recourse to the Imperial Court, and designs by degrees to introduce the title of Barons and Knights; he has already instituted an Order of Knighthood in honour of St. Andrew, who wear a blue Ribband and Star in imitation of the Garter.

The DUORNINS are Country Gentlemen, most where- *Gentry.*
of hold their lands by Knights

36 *A summary Account*

service, to appear in war on horse-back; formerly it was sufficient to send a man well armed and mounted, but the present Czar makes them or their Sons serve in person, if they cannot buy interest enough with his ministers to be excused: When they appear in the field, they are not allowed a servant, though they may be masters of some hundred peasants, and are obliged to do all the Duties of common soldiers; but their greatest mortification is, that such
of

of their peafants as will but lift volunteers, are immediately declared freemen, and in equal confideration with their mafters, though the point of honour has not yet prevailed fo far, as to give many instances of this nature. Such of the Duornins as live on their eftates, and are far from Mofco, are at much eafe, and give themfelves great airs, though they are again as humble and fubmiffive to the chief nobility and officers; for this country is the perfect model of Bayes's grand-

38 *A summary Account*

grand-dance, where every one has his share of slavery and worship ; except

The PEASANTS, who are *Peasants.* perfect slaves, subject to the arbitrary power of their lords, and transferred with goods and chattles ; they can call nothing their own, which makes them very lazy, and when their masters task is done, and a little bread and firing provided for the year, the great business of their life is over, the rest of their time being
idled

idled or slept away ; and yet they live content, a couple of earthen pots, a wooden platter, wooden spoon, and knife, are all their household goods ; their drink is water ; their food oatmeal, bread, salt, mushrooms and roots, on great days a little fish, or milk, if it is not a fast ; but flesh very rarely ; thus mere custom in them shames the pretended austerities of philosophy and false devotion, and fits them admirably for the fatigues of war, which if once familiar by use and discipline, will certainly

tainly advance far in a people, who go as unconcerned to death, or torments, and have as much passive valour as any nation in the world.

Their Religion is the Eastern Religion, or Greek Church, still more corrupted by ignorance and superstition; they think to satisfy the second Command-
Images. ment by allowing no carved images, but their churches are filled with miserable paintings without shade or perspective, and yet some of those
dawblings,

dawblings, as well as the finer strokes of the Italian pencils, are said to be the work of angels ; particularly a celebrated piece of the Virgin Mary with three hands, which is preserved in the Monastery of Jerusalem, about thirty miles from Mosco : The re- *Worship.* spect paid to these pictures is the grossest kind of idolatry, and makes up a principal part of their devotion ; to these they bow and cross themselves ; every child has it's own patron saint allotted him at baptism,

G

and

42. *A summary Account*

and every room it's guardian picture in a corner, the Russian place of honour, to which strangers pay their reverence coming in, before they begin their business, or take any notice of the company: These representations are all called by the general name of Bog, or *Fasts.* God. The rest of their worship is, in observing the fasts, which are four in the year, besides Wednesdays and Fridays, and very severe; in frequenting the church, if night at hand, once a day, in lighting

ing up wax candles to their
faints, and often repeating the
GOSPODI POHMELI, or, *Lord*
have mercy upon me, without
any farther attention : Since the
war, and frequent voyages of
their young gentry, they begin
to be less strict in their fasts ;
the Czar himself eats flesh on
all of them in private houses,
but refrains from giving any
scandal in publick. Their
Churches are very nu- *Churches.*
merous, some of stone, the
rest of wood, all built in the
form of a cross, with five little
G 2 cupolas ;

cupolas ; every nobleman's seat has one ; to build a church being thought a meritorious act, and laying a sort of obligation on heaven, though they are left at liberty to frequent them.

Secular Their parish priests and
Clergy. chaplains, are of the meanest people, *husbands of one wife*, in a literal explication of the scripture ; and when she died, the priest was formerly excluded from the service, and obliged to turn monk, or take up some sorry trade for a livelihood ; but this Czar allows them

them to continue in the under offices of the church; from this parentage and condition, it is no wonder they are very ignorant, their utmost education being to repeat the service with a musical accent, and to read a chapter in the Bible, which being in the Sclavonian language, is understood by very few of them; they never read the Old Testament in the church, and much less allow it to be placed on the altar. Their monks

Their regular and dignified Clergy.

and dignified clergy though

46 *A summary Account*

though almost equally ignorant, except some few educated at Chioff, are in much greater esteem, their habits, fasts, for they never eat any flesh, gravity, and continual devotion, draw to them the eyes and veneration of the people, and their large possessions formerly strengthened their temporal interest so far, that the Patriarch Nichon durst struggle with the Czar's Father for independency, and was not kept under without great disturbance. This power has
been

been so dangerous, that the present Czar, on the death of the late Patriarch, sequestered the office, committing the spiritual administration to the Archbishop of Rezan, and the management of the temporal affairs to a lay-commission, who have likewise the disposal of the abbey lands and revenues, which he took away some years ago on a pleasant pretence; for the abbots on his enquiry, affecting to appear very poor, alledging, that they were scarce able to maintain their

48 *A summary Account*

their monks though they confined themselves to the poor pittance of *fifteen rubles* a year *per* head; the Czar in a seeming compassion told them, he would take care of their revenues, and double that allowance; as he has done in effect, which besides the annual advantage of one hundred and fifty thousand pounds sterling to his treasury, has quite broke their interest in the country, where they have no more freehold left, and their peasants or subjects, now immediately depend upon the Czar's officers. The

The Government is absolute in the last degree, not *Government*. bound up by any law or custom, but depending on the breath of the Prince, by which the lives and fortunes of all the subjects are decided; the common compliment of the greatest Nobility being, I AM THY SLAVE, TAKE MY HEAD: However, such as are employed in the state have their share of arbitrary power, their proceedings being without appeal, all in the Czar's name, which they often abuse to satisfy their
H avarice,

50 *A summary Account*

avarice, revenge, or other guilty passions. For right between

Laws. private men, they have written laws and precedents, which they generally follow, though without any obligation, and their methods are easy and short enough, could their justice be proof against the temptation of a bribe, which is seldom found in this nation.

Administration. The Czars used formerly to keep up the veneration of their subjects, by appearing very rarely, except in publick acts of ceremony and devotion,

devotion, and then with a solemnity suitable to the occasion; while the *Bojars*, or privy Counsellors disposed of the Empire at their pleasure: But his present Majesty has broke through this formal servitude, and omits no occasion of exposing them and their customs to the common people; to weaken antient families farther, he often obliges their children to the meanest service, as being common soldiers in his foot-guards, and raises persons of no extraction to the great

H 2 employ-

52 *A summary Account*

employments. The *Bojars*, or
The Bojars. privy Counsellors, had
 formerly the chief direction of
 all the *Pricasses*, or offices :
 The *Ocolnitzzen* were their a-
 ssistants, being a lower sort
 of privy Counsellors, only ad-
 mitted on extraordinary oc-
The Dumnoy, casions. The *Dumnoy*
and Diacks. are the judges of all
 the processses, and the *Diacks*,
 the secretaries : Every *Pricasse*
 was composed of those officers,
 and had a sovereign jurisdic-
 tion of life and death, inde-
 pendant one of another, which
 often

often caused no small confusion; they were above thirty in number, for the several branches or provinces of the Empire, and though they are still kept up, yet the head officers, as Bojars and Ocolnitzen, have been dropt by degrees, and most of them left to the Diack, or secretary. In *New Scheme.* 1710, the Czar fell upon a new Scheme, which in time may cause great alterations; he has divided the Empire into eight governments.

Mosco,

54 *A summary Account*

Mosco, with all it's dependencies, is given to Mr. Strefnoff, the President at War.

ARCHANGEL, to Prince Galliczyn, formerly Envoy at Vienna.

ASOPH and the DON, to Count Apraxin, High-Admiral.

CASAN and ASTRACAN, to Lieutenant-General Apraxin, his Brother.

CHIOFF and the UKRAINE,
to Lieutenant-General Galliczyn,

czyn, who was Commissary of War with the Muscovite troops in Saxony.

SIBERIA, to Prince Gagarin.

LIVONIA, INGRIA, PLESCOW and NOVOGROD, to Prince Menzikoff the Favorite.

SMOLENSKO, to Monsieur Soltikoff.

VERONITZ and the Ship-Yards, are to be a small government apart, which the Czar reserves in *petto*.

These

These Governors have the disposal of all employments civil and military, receive the revenues, and defray all the expences in their several provinces, and send a certain sum yearly into the great Treasury, clear of all charges; they have absolute power, except in relation to the regular troops, who are never to be under their direction, nor paid by them, though quartered in their jurisdiction, but are to receive their orders immediately from the Czar and his Generals.

The

The present Czar is in his thirty-eighth year, a *The Czar.* handsome Prince, of a strong constitution, but of late much broke by irregular living, and other fatigues: He was very subject to convulsions, said to be the effects of poison from his Sister Sophia in his youth, which made him shy of being seen, but of late they are much mended. He is extremely curious and diligent, and has farther improved his Empire in ten years, than any other ever was, in ten times that space; and

I which

which is more surprizing, without any education, without any foreign help, contrary to the intention of his people, clergy, and chief ministers, but merely by the strength of his own genius, observation and example: He has gradually past through all the employments of the army, from a Drummer to Lieutenant-General; of the fleet, from a common Seaman to Rear Admiral; and in his ship-yards, from an ordinary Carpenter to Master-Builder: Farther particulars though agreeable, would be

be too long for this place ; He is good-natured but very passionate, though by degrees he has learnt to constrain himself, except the heat of wine is added to his natural temper ; he is certainly ambitious, though very modest in appearance ; suspicious of other people ; not over scrupulous in his engagements, or gratitude ; violent in the first heat, irresolute on longer deliberation, not rapacious, but near in his temper and expence to extremity ; he loves his soldiers, understands navigation,

ship-building, fortification, and fire-working: He speaks High-Dutch pretty readily, which is now growing the Court language. He is very particular in his way of living; when at Mosco he never lodges in the palace, but in a little wooden house built for him in the suburbs as Colonel of his guards: He has neither court, equipage, or other distinction from a private officer, except when he appears on publick solemnities.

The

The Court of the former Czars was very nume- *The Court.*
rous and magnificent, being filled on solemn occasions by the *Bojars*, or privy Counsellors, with all the officers of each *Pri-casse*, by the Nobility and Gentry, who were obliged to attendance by titles of honour and distinction without any salary; as the *Krapsbecks*, or Carvers, who are only two of the first Nobility, this employment being reckoned very considerable: The *Stolnicks*, or Sewers, who are also used to
carry

carry any message of importance, to receive ambassadors, &c. The *Spalnicks*, or Gentlemen of the Bedchamber; which two last titles are in great number, and descend from Father to Son, though generally confirmed by the Prince: And lastly, by the *Gosts*, or chief Merchants. On publick feasts or ceremonies all these received rich gowns of brocade lined with furs from the treasury, which they returned as soon as the appearance was over; but the present Czar has quite abolished these formalities,

lities, without settling any other court; some say to spare the expence during the war, or rather from his particular temper which is averse to such constraints. On any ceremony he is attended by the officers of his army, and nobility without any distinction, which makes a tolerable show.

His favorite Alexander Menzikoff is born of very *The Favorite.* mean parents; was accidentally met by the Czar in the streets when a boy, and for some unlucky answers preferred to serve one
of

of his gentlemen; from which step he is grown by degrees the most powerful subject in Europe; his diligence and dispatch have been his chief recommendation; and some have thought their intimacy rather resembled love than friendship, they having frequent jars and constant reconcilements, though some such accident may once prove fatal, as has already been very near. His parts are not extraordinary, his education low, for the Czar would never let him learn to read or write, and his advancement too

too quick to give him time for observation or experience. Under the Czar's name he uses an absolute power in all affairs; makes every interest give way to his private passions; in which he often contradicts the Czar's orders, and if it comes to be contested generally carries the point from his Master; he is not beloved by the common people, and much less by the old nobility and chief officers, who have a strong cabal against him, headed by the High-Admiral Apraxin. He was made Prince of

K

the

66 *A summary Account*

the Empire in 1706; Duke of Ingria in 1707; and Felt Marshal in 1709. He is a violent enemy to Felt Marshal Sheremetoff, and has often brought him to the brink of ruin. He has formed a Court after the fashion of the little German Princes, of chamberlains, marshals, secretaries, &c. most foreigners.

Monfieur Golofkin is of an *Chancellor of the Empire.* antient family, he was Great Chamberlain, and on the death of Count Golowin was made Lord Chancellor of the

the Empire, which great employment he modestly declined for several months ; he is a gentleman of good sense, very devout, and has the general character of a man of honour. No one ever complained of his cruelty and injustice, though some think he is not resolute enough in opposing that of others. He was made Count of the Roman Empire, and of Russia about three years ago.

Monfieur Schapfirroff is of no great extraction, his grand-father was one of

*Vice
Chancellor.*

68 *A summary Account*

the Jews carried out of Poland in their former wars, his father was baptized, and he professes the Russian religion: In 1705, he was private secretary to Count Golowin, to whom his diligence and knowledge of the High-Dutch tongue made him absolutely necessary; on the Count's death he was made Secretary to the Office of Embassies, and in 1709, Vice Chancellor with Count Golofkin; all foreign affairs go necessarily through his hands; he has more experience than natural qualifications; he
is

is generally esteemed fair enough in his business, but his quick preferments have given him an air of stiffness, and it is said his private interest will not always let him distinguish the merits of the cause.

Prince Dolgoruki, who some years ago was the Czar's ^{Privy} embassador in Poland, ^{Counsellor,} is often joined to these gentlemen in the consultations on any foreign affairs, but the executive part is entirely left to them; he is a person of good sense, manners, modesty and honour.

Monfieur

Monfieur Apraxin is of a *High-Admiral*. good family, his ancestors having been Stolnicks, or Sewers; the old Emprefs dowager, Mother of the Czar's eldest Brother, is his Sifter; this alliance brought him into court and favour, which he soon improved by a ready wit, and a conscience not enflaved to any scruples to obstruct his fortune; he had been Commissioner of the Admiralty for many years, and on Count Golowin's death was made High-Admiral; in

1709,

1709, he was made Governor of Ingria in Prince Menzikoff's absence, and had the good fortune to see the Swedish army under General Lubecker kill their horses, and retire out of that province unaccountably; which miscarriage turned as his own merit, and thereby increased his credit with his Prince; he is very revengeful, and no enemy to presents; he appears openly against the Favorite, and has great credit at court, but his indiscretion in drink when in the Czar's company, sometimes

times exposes him to disagreeable accidents.

Felt Marshal Sheremetoff is
Felt Marshal. of a very antient family, famous for producing lucky Generals against the Tartars, of which success he has also had his share in the late Turkish war: In his travels to Italy, he made a campaign on the Galleys of Malta, and is honoured with a Cross of that Order. He is the politest man in the country, and most improved by his travels, is magnificent in his equipage and way
of

of life, extremely beloved by the soldiers, and almost adored by the people; he enjoys a vigorous age at sixty and odd, has good-nature, honour, and as much personal valour as any man, but not experience enough to act against an army of regular troops; he often suffers under the Favorite's persecution, and has more than once desired leave to lay down his command, but has always been refused.

There are several other Ministers who come into the privy Council, but as they confine

L themselves

74 *A summary Account*

themselves to the domestick affairs, and have no remarkable degree of favour, or influence in matters of state, I shall not trouble you with their names or employments, but proceed to some small account of the Czar's riches.

The commerce coin of Muscovy is a small piece of silver about the bigness of an English penny, called a Copeek.

3 COPEEKS, make an	ALTINE.
10 COPEEKS, ---- a	GREIVEN.
25 COPEEKS, ---- a	POPOLTINE.
50 COPEEKS, ---- a	POLTINE.
100 COPEEKS, ---- a	RUBLE.

Formerly

Formerly there was no coin but Copeeks, and the other names were only to signify such a number, for the easiness of the tale; but in 1703, great quantities of specie, Rubles, half Rubles, &c. were made, though the mass of money is still in Copeeks.

All great sums are generally by Rubles, or an hundred Copeeks, the intrinsic value whereof may be about 4s. 4d. English, but in the course of exchange, is generally reckoned

L 2

at

76 *A summary Account*

at 6 s. 8 d. : And fifteen years ago was 10 s.

An hundred Rubles weighed
Weight. twelve pound in John
Basilowitz's time, who reigned
from 1540 to 1584, and were
kept up to eleven pounds till the
reign of his present Majesty, but
since the war, and growing ne-
cessities of the treasury, have
been reduced by degrees to six
pounds twelve ounces and three
quarters, English weight. An
hundred Rubles of old Copeeks
weighing ten pounds, are re-
ceived in the treasury, at an al-
lowance

lowance of fifteen *per cent*, and are there melted down into new Copeeks.

The standard should be of the same goodness with *Standard*. Lyon Dollars, *viz.* twelve ounces fine silver, and four ounces alloy to the pound weight, but most that is carried into the mint, is not above ten ounces fine silver, and being seldom tryed when melted, their coins are of different value, as the run happens to be good or bad, Plate, Dollars, and old Copeeks, being

78 *A summary Account*

being all melted together, with an additional alloy of brass.

The Silver is Cross Dollars, *Imported.* Lyon Dollars, and Albertus Dollars, with unwrought Plate, brought from Holland and Hamburgh, and Bremen. Of Dollars yearly from two to three thousand; part to clear the Merchants customs; part in return of brass money, which the treasury often advances to foreigners, to be repaid in Dollars at two years end, and partly for the advantage of the exchange, in the course
whereof

whereof to Holland, a Dollar is only rated from sixty-two to seventy-three Copeeks; but can be sold in Archangel from eighty-five to ninety Copeeks.

In 1702, the first Ducats were coined with the *Gold Coin.*

Czar's stamp, at twenty-six carrats, being the value of Holland's Ducats; but next year the direction of the mint was taken from the foreigners, and the Chinese gold being only at twenty or twenty-one carrats from one to three grains, was left without refining, which utterly

terly decried those Ducats, and very few have been coined since 1706. The gold is imported in ingots from China, about three hundred and sixty pound weight English yearly, besides some thousand Ducats brought every summer by the fleet to Archangel.

In 1705, the Czar begun
Brass. to coin brass Copeeks, halves and quarters, thirty-six pound of brass English weight which is bought in Mosco for seven Rubles, produce twenty when coined; about ten thousand

land of these Copeeks are given out monthly, but no one is obliged to receive them in payment, except such as are in the Czar's service ; they may be negotiated against silver at two *per cent.* loss. The brass comes by the fleets to Archangel.

The money of this country, as to the supplies of silver and value of the coin, de- *Trade.* pends so much on Trade, that it will be necessary to make some mention of the chief branches in this place.

M

The

The goods chiefly imported
Importations. from England are all
sorts of woollen manufactures,
lead, tin, dying-woods, indigo,
pewter, olibanum, brimstone,
lignum-vitæ: The Hollanders
and Hamburghers, besides these,
bring wines, paper, allum, glass-
ware, spices, dollars, plate, gold
and silver lace, brocades, Silesia
cloth, and all sorts of gal-
lanteries.

The English export chiefly,
Exportations. hemp, flax, train-
oil, linnen, pot-ash, rhubarb,
ifinglass,

ifinglass, wax, tar, red-hides and caviar; the two last to Leghorne. The Hollanders and Hamburghers carry out farther, wood-ash, masts, hydes dried and salted, tallow, fables, hemp-feed, mats, and hogs-bristles.

Their Fishery of *seals*, or sea-dogs, about ten *Fishery*. thousand a year, yield five thousand measures of oil; the skins and oil are sent to England. *Morses*, or sea-horses, from Nova Zembla, used to load thirty boats a year with blubber, the teeth are esteemed next to ivory,

but the trade being monopolized by a COMPANY decays daily. Cod and stock-fish, about three ships lading yearly to Denmark; salmon salted and dried, a ship's loading to Bilboa; these with the cod are taken in the North-sea, about Kilduyn and Cola; but the ships bring salt from St. Ubes.

The foreign merchants are *Customs.* obliged to pay their customs in Dollars specie, at Archangel, which are only reckoned at the antient value of
fifty

fifty Copecks when received into the treasury, and that too by weight, fourteen to the pound, which seldom holding, it comes from fourteen and a quarter to three quarters. Foreigners pay five *per cent.* for all goods bought and sold by weight, and four *per cent.* for those by tale or measure; they only pay single duties, either for their exportations or importations, whichsoever mount highest at the end of the trade time; goods sent up by foreigners to Mosco, or any inland towns pay ten *per cent.*

86 *A summary Account*

cent. in Dollars, and six *per cent.* where they buy or sell in Rufs money : The Russians pay five *per cent.* where they sell or buy in the country, and five *per cent.* at Archangel. Wine pays a particular custom of five Dollars an hoghead.

In 1710, the course of *Exchange.* change was three Rubles ten Copeeks to the pound sterling, whereas the intrinsick value is only about four Rubles and a half ; for the exportations exceeding the importations near
two

two thousand Rubles yearly; the national credit of their money is kept up, which would fall almost to the real worth, if any considerable sum above the ballance of the trade was to be remitted beyond sea.

The Czar's revenues may be about seven millions of Rubles yearly, arising chiefly;

From the custom of goods in Archangel, and *How arising.* the duties on them when bought or sold by retail in the country.

From

From *monopolies* in the Czar's hands; pot-ash yearly to the value of forty thousand dollars; wood-ash one hundred and twenty-five thousand dollars; caviar, thirty thousand pieces of eight, besides what is consumed in the country; rhubarb, about twenty thousand dollars, all which commodities are never sold but for specie dollars; tar, in 1706, forty thousand dollars, and another for ten thousand rubles; very little sold since.

From

From *inland monopolies*; salt, five hundred thousand rubles; tobacco, boards and bricks, which are only sold by the Czar's officers, the sums uncertain; furs from Siberia in the treasury; brandy and beer, which in the town of Mosco alone bring in six hundred thousand rubles *per ann.*

From the *mint* by re-coinage of dollars, at one hundred and twenty *per cent.* profit.

Of OLD MONEY at thirty *per cent.*

Of BRASS MONEY at sixty-five *per cent.*

From

N

From

From the *Chinese trade*, which, if well managed, would bring in about two or three hundred ^{thou} rubles profit yearly; the cargoes thither are several sorts of European merchandize, but chiefly furs, as fables, ermines, black foxes, and grey squirrels, from Siberia; the returns are made in damasks, callicoes, blew linnen, gold, tapistry, China ware, and drugs: A great part of these used to be sold into Lithuania and Poland, which trade is now almost sunk.

From

From the *Persian trade*, whence raw-silk, carpets, brocades, sattins, jewels, and Persia leather are imported, chiefly by the Armenians, who only pay two *per cent.* custom, for whatever they transport through the Czar's dominions without breaking bulk, according to an old privilege.

From *new impositions* on stamp paper ; on all law-suits, which pay ten *per cent.* of the value contested ; oven, or chimney money ; all hackney horses

and carriages; all Bath-stoves, of which every village has one in publick, and every fashionable house one in particular, are taxed at a ruble a piece yearly.

From the *abbey lands*, which were very considerable, but have been taken into the Czar's hands, and are managed by a secular commission, a competency being allowed each cloister in proportion to the number of monks.

From the *land tax*, and *royal domaines*.

All

All the Czar's expences are paid within the year, which makes the present war fall very heavy on him; for though he does not owe above two hundred thousand rubles on all accounts; his treasury by ill management cannot find credit for ten thousand rubles; nor will the merchants give any bills of exchange, till they have received the money before hand.

Mines there are,
Of *iron*, feveral in Russia indifferent; in Siberia very good.

Of

Of *copper*, at Olonitz.

Of *brimstone*, at Casan, and in the mountains which bound Siberia.

Hot baths and *mineral waters* are found about Terki on the Caspian-sea.

Salt-peter comes from Chioff and Rebena in the Ukraine, as good as any in the world.

In 1709, an engineer sent down into the deserts between Afoph and Chioff, found three mines of different ore, on the
river

river Kundruczi which falls into the Don, above the town of Circasky : On other little rivers which fall into the Donec, he found old melting ovens, the openings of several mines which had been worked on, all thought to be the remains of the Genoese colonies. He supposes some of them to have vitriol, and quicksilver, or good tin.

The Czar's forces which are regimented, cloathed *Czar's Forces.* and disciplined, after the foreign manner, including the seperate bodies

bodies in Poland, Lithuania, Livonia, and Ingria, with the several garrisons along the frontiers from Chioff to Wyburgh, consist of fifty-one regiments of foot, *viz.*

Of the Cossacks and Tartars I cannot make any just computation; the most the Czar has had together in this war, have not been above 30,000 men.

To

To these must be added, the garrisons of Siberia and the North, which cannot be drawn off for any service in Europe.

The pay of the Officers in the garrisons and uncompleted regiments is,

Colonel, from 25 to 30 Rubles, *per month*.

Lieut. Colonel, 15 Rubles, *per month*.

Major, 14

Captain, 11

Lieutenant, 9, 10 Copecks.

For cloathing the Czar's army, every man is allowed eight *arshines* of cloth, from

from fixty to seventy copeeks the *arshine* *; the first cost of the cloth in England is about 3s. 2d. the yard.

Cloaks for the Dragoons, each six yards.

Hats delivered into }
the magazines at } 60 Copeeks a piece.

Boots, 80 Copeeks a pair.

A Soldier's Musquet, }
bad, } 80 Copeeks.

A Sword, 25 Copeeks.

A pair of Pistols, 3 Rubles.

N. B. *Only the guards have Pistols; they have also better arms from Utrecht, or Saxony.*

* The name of a Russ measure, near a quarter less than an English yard.

P

The

The army is cloathed once in two years; towards the cloathing a copeek a day is deducted from the foldiers; the Czar finds the arms and horfes.

The nobility are obliged to furnish the horfes for the dragoons, at seven rubles a horfe, paid out of the Czar's treasury, though the horfes often cost them ten or twelve rubles a piece. Some of the regiments have been mounted on the Swedish horfes which were furrendered at Perevolotsch; the rest

very

very ill mounted : Most of the dragoons are gentry, obliged to appear by the tenure of their lands.

The artillery is very well served ; the great guns *Artillery.* are most of mettle, generally from three to thirty-six pounders, new cast since the present war, either from old pieces which had been heaped up by the Czar's ancestors, without any just regard to the *calibre*, or from the bells which every church or cloister were obliged to furnish to the foundery about

108 *A summary Account*

ten years ago, according to their largeness and income. In 1708, there were a thousand pieces of cannon in the town of Mosco alone, from one to sixty pounders; the arsenals of Plefcow, Smolensko and Chioff were filled in proportion; besides the field artillery, every battalion having two long three pounders of mettle; the mortars are of brass, or Siberia iron, of all bores. The Czar is personally very curious in his fire-works, is Captain of his bombardiers, and has most foreign officers, which

which he engaged in England or Holland after the last peace. The powder is made in Mosco strong and good, except the delivery is connived at by the officers for their own profits; the magazines are not filled with stores as they ought to be, but sufficient quantities may be prepared in a little time, there being several mills ready, and always plenty of good salt-peter from the Ukraine.

Account of the progress made by the Czar in his shipping.

The

110 *A summary Account*

The first ship was built for Shipping. the Czar's pleasure when very young, on the *Bielo Ozero*, or White-sea, a large lake about three hundred miles from Mosco.

In the winter of 1695, several half gallies and brigantines were prepared at Mosco, and carried by sled-way to Veronitz, where they were put together, and sent down the Don to be used at the siege of Asoph.

In 1696, a considerable number of ship-carpenters coming
from

from Holland, with two Italians and a Greek master from Venice, a fleet was raised at Stupena and Veronitz, for which end the whole Empire was divided into eighty-four parts, and each division to furnish a ship, or an equivalent number of gallies, brigantines, and small craft: The chief nobility appointed to oversee this work in the Czar's absence, contracted for the ships with foreigners, who for want of experience, dry timber, and sufficient time, as well as for their private gains, run up the vessels

III 2 *A summary Account*

vessels very slightly with green and bad stuff, so that they decayed before they were finished; which the Czar perceiving at his return from Great Britain, he came by degrees entirely to dislike the Dutch building and masters, and discharged them as he could procure English. The last ships built by the Dutch, were eleven frigates at Stupena in 1703.

The fleet being built on
*Places where
the Ships
are built.* large rivers, far up
in the land, it may
be of use to give some short
description

description of the places, where the yards either are, or have been settled.

Stupena is a small town on the river Veronne, a- *Stupena.* bout twenty English miles above Veronitz.

Veronitz is another small town, lying in 50 de- *Veronitz.* grees 20 minutes of northern latitude, and in 63 degrees longitude, on the Veronne, eight English miles above the mouth of that river, where it falls into the Don. In 1696, the

Q

Czar

114 *A summary Account*

Czar began a stone arsenal there, to preserve all manner of stores. The ships here, and at Stupena, were built on the land on launches, but could not be got a-float without great difficulty, nor otherwise than in the spring, to remove which inconveniency a sluice and work was made at the mouth of the river in 1702, for raising and letting off the water at any time required; and by this means fifteen ships were laid dry on the land to be refitted in 1703: But proper care not being

ing taken to keep the sluices open in the spring, when the floods came down, and brought vast quantities of sand washed off the neighbouring mountains, the channel began to choak up, scarce six foot of water remaining where seventeen were formerly.

This disappointment, with the bad air, the ground being marshy, and the people subject to agues in the spring, which has carried several of them off, obliged the Czar to think of removing his yards, and the

116 *A summary Account*

river being visited in 1705, for a proper place to make some docks, Taveroff a little village six miles lower was pitched on by the High-Admiral Apraxin, contrary to the opinion of all the ship-carpenters and sluice-makers, who represented that it was impossible to lay any foundation there, which could secure them against the force of the floods, the banks being a loose sand; but the Admiral continuing obstinate for some private interest, eight docks were begun under the direction of
of

of a Polander, Anniseé Miketowick, in 1706. The gates and foundations were accordingly blown up in 1707, and notwithstanding all possible care and reparations, met the same fate in 1708: In the same year however positive orders being given to set up four eighty gun ships, three of forty-eight, and one of twenty-four in that place, the carpenters resolved to open the gates in the floods and let in the water, rather than have the foundation of the dock tore up, and the carcasses of the ships

118 *A summary Account*

ships spoiled at the same time, as happened to one the year before : This occasions a great delay of near six weeks in the spring, during which all the men lye idle.

The Czar being convinced of these inconveniencies in 1709, when he was there in the spring, ordered the ships to be run up with plank, until they could hold water, and then to abandon the work, which had cost above one hundred and sixty thousand dollars, and the lives of three or four thousand men ;
and

and a new work is begun at the mouth of the river Seriot, which forms a small lake a little before it falls into the Don, about one hundred English miles below Veronitz; and an engineer is already ordered thither, to lay out the plan of a fortification, the place being on the *step*, or desert; exposed to the rebellions of the Cossacks, and sudden incursions of the Tartars.

The river Don springs from the *Ivan Ozero*, or *River Don*, St. John's-sea, in the ^{the} ancient *Tanais*.
54th degree 15 minutes, and
from

from thence runs a course of about five hundred English miles to Afoph, a little below which place it falls into the Palus Mæotis, in the 47th degree 20 minutes. The Don is below Veronitz, from three hundred to six hundred fathom broad, and deep enough from the middle of April to the end of June for ships of burthen, but in the other months the water is so low, that in several shallows there is not above a foot and a half. In the spring floods this river rises from sixteen to eighteen
teen

teen foot perpendicular, and the current is very rapid. In 1709, the Czar set out from Veronitz with six brigantines on the tenth of April, and arrived at Asoph on the twentieth of the same month; two men of war, which were carried down at the same time, got thither about a fortnight afterwards.

Asoph lies at the mouth of the river Don, in 47 de- *Asoph.* grees 27 minutes latitude, and 64 degrees 32 minutes longitude; it was taken by the Cossacks in 1637, who continued

R masters

masters of the place till 1642, when it fell to the Turks, and remained in their hands till 1696, but was then taken by the Czar; the fortifications were new modelled, and two little fortresses built at the mouth of the Don. This haven is very inconvenient, and almost impracticable for ships of burthen; for the Don dividing into several branches, the currents are not strong enough to clear the mouths of the river from the sands which choak them up, and leave not above six or seven foot

foot of water in most places, so that the men of war can only go out in the spring floods, and then must be lightened from their artillery, &c. or when violent winds have set in from the sea for several days together, which raise the water to a very great height, as generally happen in autumn in the Finnish gulph.

By reason of this difficulty, the Czar was obliged *Taganrok.* to look out for another haven, and pitched on a nook of land which runs out into the Palus

Mæotis, to the west of Afoph, where he built a very good town, regular fortifications, a large mole like the basin of Toulon, and for the greater security, a redoubt in nature of the Rielbank has been raised before the entrance. When this work was begun, the harbour was deep enough for ships of force, but as the mole was carried on, the sands increased, and now a ship of fifty guns cannot go in or out without camels, as at the Pampus; so that it cannot serve for a retreat from an enemy, or in bad weather.

The

The Palus Mæotis is about three hundred Eng- *Palus Mæotis.* lish miles long, and generally about an hundred broad, it ebbs and flows as the Mediterranean, the water is very shallow towards the shores, and subject to great storms, and short waves.

The Czar's ships for the Baltick are built at *Ladinopole* Ladinopole, and Olo- *and* *Olonitz.* nitz; or Olonec, villages lying on two small rivers on the north-east side of the Ladoga-sea.

At

At Petersburg there is a *Petersburgh.* little yard, where all forts of boats and small craft are built, and some of the frigates are repaired : This is the Czar's favorite town and haven, built on two small islands in the river Nieva, which is there large and deep enough to receive sixty gun ships close to the walls of the fortrefs : The foundation of this new town was laid soon after the taking of Nyenschantz, which the Czar demolished, in hopes it might one day prove a second Amsterdam or Venice ;

to

to people it, the nobility were ordered to remove hither from the farthest part of the country, though with no small difficulty, since the climate is too cold, and the ground too marshy to furnish the conveniencies of life, which are all brought from the neighbouring countries; however, the Czar is charmed with his new production, and would loose the best of his provinces sooner than this barren corner. The fortress is built on a seperate island with good stone bastions laid on piles, but of much too narrow an extent

extent to make any considerable defence, in case of an attack. The floods in autumn are very inconvenient, sometimes rising suddenly in the night to the first floors, so that the cattle are often swept away, and the inhabitants scarce saved by their upper stories; on which account they can have no magazines or cellars, nor is the ground practicable for digging, the water coming in at two foot depth; the river is seldom or never clear of the ice before the middle of May, and the ships cannot

not hold the sea any longer than the end of September, without great danger.

At Archangel, the royal transport lies in very good *Archangel.* condition, with a frigate of sixteen guns and another of twenty; some merchant ships are built almost yearly here, by a Dutch builder, with Russian carpenters under him.

At Casan about forty frigates from eight to fourteen *Casan.* guns, which were built there, but very ill proportioned, lye rotting on the shore.

S

Number

130 *A summary Account*

Stupena of	
One by Mr. Nye of	16
<i>The last in imitation of the } transport.</i>	

In all, 13.

In which Mr. Cofens has
been employed eight, and Mr.
Nye eleven years.

On

On the STOCKS at TOVAROFF.

	GUNS.
Two by Mr. Cofens of	80
Two by Mr. Nye of	80

The frames of these are up, but on representation of their being too large, only one is to be finished for a trial.

The Czar has timber lying ready there for two more of eighty guns; but none of these will carry so many guns as they are rated at, by six or ten each.

132 *A summary Account*

On the LAUNCHES at TOVAROFF,

Two by Mr. Cofens of 48

One by Mr. Nye of 48

One by Mr. Nye of 24

*The last is designed for a battery ship, }
to carry one tire only, 24 pounders. }*

These last ships now in hand are to be built on chests, for the easier floating them down the Don, and over the flats at Asoph.

On the Don at several places, are thirty-six fail of Dutch ships from eighty to thirty guns, all rotten, and only planked on the out-side to keep above water for a show,

a show, but as the new ships can be got ready, will be broke up and used for firing, the two lately re-built having not proved worth the expence of time and charge.

In the Palus Mæotis; at Asoph are two men of war British built, and carried down thither in 1709; the rest are brigantines and half gallies.

At Taganrok are six or seven Dutch built ships quite decayed; two are used every year to fetch salt from one of the islands in the Palus Mæotis, on the coast
of

of Georgia, and are all fit for no other service.

The dimensions of the eighty
Dimensions. gun ships are fifty feet broad, and one hundred and sixty-eight feet long, and seventeen feet and a half is to be their greatest draught of water; but they being built too shallow for the length and breadth, the shipwrights were of opinion, their backs would be in danger of breaking in bad weather, that they had not hold enough in the water to save themselves from a lee-shore, and were of too great bulk

bulk for the Palus Mæotis. The other rates are after the same proportion.

All the ships by the fault of the timber, some being green, others over-grown, and a great part cut in the spring after the sap is run up, which makes the wood spongy, moistness of the air, and damps of the earth, rot as fast as they are built; to prevent which, a proposal was made by Captain Perry, three years ago, to lay them up in a dry haven, and cover them with sheds; the timber for the project
was

was cut down, but the work not yet begun; a copy of the proposal was sent by me to Great Britain some time ago.

The fleet at Peterburgh, consists of twelve frigates, eight galleys, six fire-ships, and two bomb-vessels, besides small craft. Of the frigates only three are in a condition of service, the rest being decayed will scarce endure the sea, and much less an engagement before they are rebuilt.

At Olonitz, two ships of fir are building of forty guns, and may be ready this summer.

At Ladinople, two by Mr. Brown of fifty guns were to be ready the last summer, the knee, timbers, stem and stern are of oak, brought from Casan by land.

One ship of eighty guns was to be set up last year.

T All

All the other ships at Peterburgh and Archangel are of fir, those at Veronitz and Casan are of oak. In 1710, orders were given for fitting up twenty-three sail of ships on the Don, being those built, or building by the English, which are like to be the main force of the Czar's fleet, the rest being show and number.

The fleet at Petersburgh has
Sea-Men only hitherto been
at
Petersburgh. manned in any tolerable regularity; each frigate
there

there had, a captain, lieutenant, master, boatswain, boatswain's-mate, seamen, and eighty marines; but on any expedition they were always re-inforced by the soldiers of the garrison.

On the thirty-six sail of Dutch ships on the *On the Don.* Don are thirty-five Dutch officers and seamen, and about two hundred Russians.

At Taveroff, are about fifteen officers and seamen.

At Taganrok is Commodore Beckham, an Englishman, with about three foreign officers and seamen, and sixteen Russians on board each ship; When the vessels sail for salt, they are manned by the soldiers of the garrison.

At Archangel was a Commodore, a Hollander; the frigates there were better manned by Russian pilots and watermen, and foreign seamen, which were yearly debauched out

out of the fleets : These vessels are now pirating in the Baltick.

A sea captain has thirty-nine rubles, *a month* ; a lieu- *Pay.*

tenant seventeen ; an under lieutenant and master eleven :

The Russian seamen and marines are paid on the same footing with the land forces, *viz.*

each man a tun of corn, the eighth part of a tun of pease or oatmeal, and ten pounds of bacon, *a month*, and eleven rubles *a year* in money. The fo-

reigners have something extraordinary for their encouragement.

The

The communications which
Communications between the the Czar has order-
Don and Wolga. ed between several
rivers, with a prospect of ad-
vancing his trade and shipping,
are between the Don and
Wolga.

This passage was first en-
Don and Wolga. deavoured to be cut
by Sultan Selim, for the better
transportation of his army to
Astracan and the Caspian-sea
against the Persians, in 1560,
but his design was defeated by
the

the continual irruptions of the Cossacks and Ruffes. This enterprize lay dead till about 1693, when the Czar employed an engineer, Colonel Breckel, to work on the communication, but being very ill used by Prince Boris Alexewitz Galliczyn, governor of the province, who openly opposed the work, and who would neither furnish men or materials in pursuance of the Czar's orders, the engineer to avoid his persecution fled away to Persia. In 1699, another engineer, Captain Perry, was employed

152 *A summary Account*

employed in this service, but met with the same discouragement from Prince Galiczyn as his predecessor, notwithstanding which, the work was carried on with pretty good success till the end of December 1710, when the Czar ordered it to be laid aside till after the war, since he could not so well spare the number of men required in the present juncture. The digging work is about half finished, twelve thousand men and about five years time, would serve to perfect the whole; the channel
was

was to be large and deep enough for ships of eighty guns to pass; it is to be dug through near three English miles, in which space there is a large mountain, between the rivers Lavala and Camishinka; the first falls into the Don about one hundred and thirty English miles from the Canal, and the last into the Wolga, about nine English miles from the Canal; six sluices are begun but none finished, and six more are to be made in the Camishinka: In all from the Lavala to the place where the

X Camishinka

154 *A summary Account*

Camishinka falls into the Wolga, are sixty-two thousand three hundred English feet.

The second communication *Don and Occa.* is by a canal near the Ivan Ozero, between a branch of the river Don and the Tula, which falls into the Occa: This work is above eight English miles long, and has several stone sluices, though not quite brought to perfection, and is only designed for a passage for large boats.

The

The third communication is between the Wolga ^{Wolga and} and the Wolchow, a ^{Ladoga-Sea,} river which runs by Novogrod and falls into the Ladoga-sea: This canal is cut near Wifnei Woloczok, I think not above an English mile long, and quite finished, a mathematician was sent down this spring to take an exact survey of it and the upper parts of the two rivers; and another engineer was at the same time dispatched to view the rivers about the Biel Ozora, and

other lakes, to see whether he cannot find a more convenient passage into the Ladoga-sea; the river Wolchow below Novogrod having two or three dangerous falls. This communication seems to be more for curiosity than use, for the frigates now bringing from Casan, have been three years in their passage; they are frozen up the six winter months; during the spring floods for five or six weeks it is scarce possible for them to mount the Wolga against the current; towards the autumn the waters
are

are very low, and they are often forced to warp round the points of land and sand banks: This last winter a carpenter was sent to cut down oak for six fifty-gun ships at Casan, the timbers were to be rough hewn there, and transported in flat bottom boats to Petersburg; by the time these will be on the road, it will be certainly known whether this communication can be of any use to commerce.

These observations on the state of Russia are *Conclusion.*
all that occur to me as necessary,
till

158 *A summary Account*

till the influence of this nation
in the present war, and it's
share in the general affairs of
Europe, makes this country
better known to strangers.
